

TOWER ASSET MANAGEMENT

1100, 3100 & 3300 SERIES Real-Time GSM Monitoring

GSM MONITORING

Overview

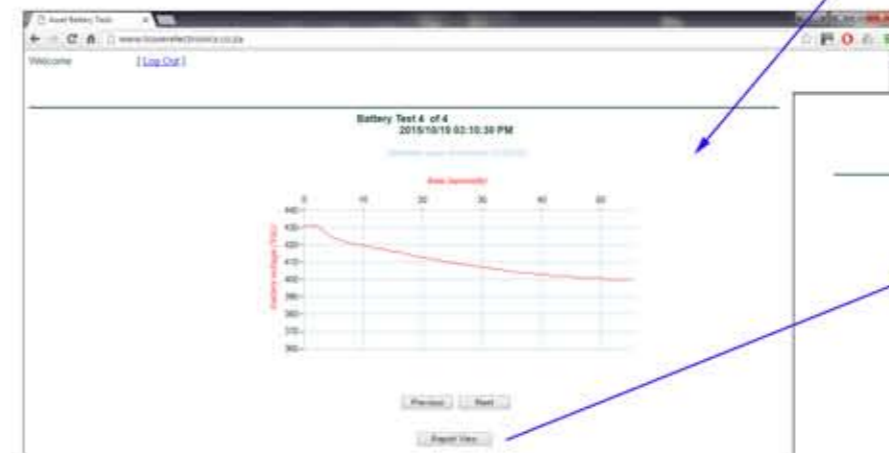

The TOWER Asset Management System uses a data connection to connect your TOWER product to "the cloud". This "cloud" will time stamp and log events with analogue values in an SQL database. Customisable remote services will monitor the assets, raise alarms and notify selected personnel on any change in condition. The database is accessible to the customer via a logon web portal - making it easy to navigate through the asset status at any time, from anywhere using a web-enabled device. Detailed management reporting and maintenance history can be drawn from the database, making it a valuable tool.

Report Information:

Service Company:
End Customer:
City Name: Durban
Site Address:
Unit Location: Office Storeroom
Site Conditions: Average
UPS Model: Maxi T Norm. Ex Tail
UPS Rating: 5kVA
UPS Serial Number: 7879/190315
Battery Type: CBB 12V7 Large Terminal
Battery Quantity: 128
Battery Date: 2015/03/24 08:34:14 AM
Last Service Date: 2015/10/15 08:34:14 AM

Battery test result:

Battery test timestamp: 2015/10/19 02:10:30 PM

The closest snapshot on record is within 4 minutes of the battery test.

Output Voltage	231 V AC
Output Current	8 A AC
Frequency	49.9 Hz
Main Voltage	223 V AC
Battery Voltage	431 V DC
Cabinet Temperature	30 °C

Snapshot Timestamp: 2015/10/19 03:06:04 PM
